

The recipe for LifeTime Wood Treatment has been handed down for over 60 years through generations of a family of woodcrafters.

Heightened concerns about our environment and the protection of our natural resources are apparent everywhere and the availability of this product is truly good news. Users of LifeTime Wood Treatment will save time and money while lessening the harmful impact on our soil, air, water and forests.

Q: What is LifeTime Wood Treatment? A: LifeTime is a highly effective wood treatment which beautifies outdoor wood.

Q: Many products claim to be safe to use, what makes LifeTime so different? A: Over time and with exposure to the sun and rain, all LifeTime treated wood develops a beautiful silver to dark brown patina.

Q: What is LifeTime made of? A: Lifetime is made up of naturally occurring plant and mineral substances, combined in a special family recipe. The solution soaks in and penetrates wood fibres. Independent laboratory testing confirms that LifeTime creates no harmful residue in soil or water.

Q: Lots of products for exterior wood claim to be no-maintenance, but in fact have to be re-applied within 2-3 years. What does LifeTime mean by no-maintenance?

A: No-maintenance means you apply one treatment of LifeTime and never touch it again. LifeTime can not be worn off will not peel or fade (natural weathering actually increases its' beauty and effectiveness).

Q: Can LifeTime be used for posts in the ground and retaining walls?

A: Absolutely, LifeTime is effective for outdoor wood applications, including decks; fences, retaining walk flower pots, picnic tables, furniture, raised planters, birdhouses, siding, doors, windows, gazebos, and even floating rafts and marina docks.

Q: How is LifeTime applied?

A: It can be applied in all conventional ways including by brush, roller sprayer or dipping. It can be safely worked while still wet without leaving permanent finger or foot marks, and can be applied in any weather even 0° Celsius.

Q: How long is its' shelf life?

A: In powder form, LifeTime can be stored indefinitely. After mixing with water, the solution keeps best in a sealed jar, and will last a very long time. With increased time, however, water may become stagnant unless distilled water is used to mix a batch. Because you can mix only what you need, the likelihood that you will have large amounts of LifeTime solution left over is minimized.

Q: Will LifeTime prevent wood from cracking, checking & warping?

A: All wood contains moisture and dries during exposure to sun and wind. LifeTime will not cause additional cracking or checking in the wood.

Q: It sounds expensive. Is it?

A: No! In fact, LifeTime is priced below several nationally advertised stains and wood treatments that must be applied many times over the life of the wood. LifeTime is simply the least expensive and most effective wood treatment available. Shipping and handling costs have been greatly reduced because LifeTime is purchased in powder concentrate form and the savings are passed onto the end user.

Q: Can I apply sealers or colored stains over LifeTime?

A: Sealers are not necessary nor are

they recommended, as they may not last. LifeTime itself does not seal wood, but instead allows the wood to breathe and age naturally. Colored stains can be applied over LifeTime. Please consult a LifeTime representative before attempting to apply colored stain.

Q: Who is using LifeTime Wood Treatment?

A: Contractors have been using it for 60 years in house and marina construction. Some organizations using LifeTime:

Parks Canada

has used LifeTime in several of our National Parks including Banff, Kootenay and Yoho National Parks.

The City of Calgary

is using LifeTime for treating wooden roadside sound barrier fencing.

Nova Scotia Natural Resources

is testing the product on picnic tables in Provincial Parks.

Several construction contractors and log home builders are now using LifeTime in Canada and the U.S.
