1⅜" X 12"	8,000 lbs.
1½" X 12"	10,000 lbs.
1⅝" X 12"	12,000 lbs.

*\*Note: Contact an engineer for the correct Post Screw Jack for your specific application(s).*

Post Screw Jacks aid in the compensation of settling log walls. It has a threaded rod mounted to a steel plate with a nut acting as the height adjuster, with another steel plate on top of the nut. The bottom plate is screwed to the floor and the top plate is screwed to the bottom of the vertical log post. The threaded rod will pass through a hole in the center of the upper plate as shown and into a pre-drilled recess in the log.

Note: It takes years for the logs to settle, which means that it will take some time for the jack to be lowered to a point where it will not be seen by someone in the room. A wooden box can be made to conceal the jack.
